3.3 Improved compatibility between BizInsight Desktop Edition and BizBroadcast .	4
4. Known Issues	5

# 1. New Features

### 1.1 Localization in Spanish, German, and French

BizBroadcast supports three new languages in Excel's ribbon button, Application Settings and error prompts. Language settings are determined by the Windows local operating system regional settings of the client workstation.

### 1.2 On-Demand Startup

BizBroadcast has been modified to not automatically start up when Excel is started. Users must click on the **Load Broadcast** ribbon button to load BizBroadcast. The on-demand load is to reduce Excel startup add-in conflicts and improve Excel load performance.

# 2. Product Enhancements

#### 2.1 User Interface Improvements

Broadcast user interface forms and prompts have been improved to correspond with the new layout in BizNet products.

### 2.2 BizBroadcast On-Startup Batch Files

With the modification to the load behavior of BizBroadcast to load on-demand, new batch files are included with the BizBroadcast installation that can be used to switch BizBroadcast back to loading on Excel startup. These files are provided for users who may wish to change BizBroadcast's default load behavior from on-demand to on-startup. The new files are located in the Reg folder of the installation folder.

### 2.3 Tab-Delimited Text RenderFormat

A new RenderFormat, "Text", has been added to the product that saves the output in a tabdelimited text document that can be more readily imported into other applications.

## 3. Issues Resolved

# 3.1 Range name already exits message when merging tabbed parameter XLSX output

When using MergeFiles to merge Excel workbooks that are tabbed parameter output, the BizBroadcast merge process is being halted by a prompt to reconcile an issue with a named range already existing. This issue has been resolved. CASE0000029478.

### 3.2 "You can't undo deleting sheets" message using PDF or XLSXVALUES RenderFormats with a multiple tabbed parameter distribution

During PDF or XLSXVALUES format, multi-parameters in the tabbed parameter field results in the following error: "You can't undo deleting sheets, and you might be removing some data. If you don't need it, click Delete." This error has been resolved. CASE0000028449

### 3.3 Improved compatibility between BizInsight Desktop Edition and BizBroadcast

When using BizInsight Desktop Edition and BizBroadcast several issues were occurring that have been addressed:

- When using Excel 2013 64-bit, Excel crashes when trying to broadcasting reports. CASE0000029504.
- Improved XLSXVALUES support in handling error prompts between BizInsight Desktop Edition and BizBroadcast.
- Improved compatibility between BizInsight, BizInsight Desktop Edition, and BizBroadcast with respect to refreshing dynamic tables and cached tables in the workbook.

### 4. Known Issues

- 1. When errors are prompted during BizBroadcast processing, reference the About box for further details on the issue.
- 2. A Reference Error can occur in any workbooks. If cell referencing is used in the Distribution Template and the reference is broken or missing, BizBroadcast processing may return a #REF! error in the Excel. ID: -2146826265 in the file or file-name.

**Workaround:** If the drag and drop method is used, save the Distribution template in only xlsx format for Broadcast to process. The newly created workbook will need to be saved on the local machine for Broadcast to distribute multiple times. While in Excel, open the workbook template separately and click the Run Now button to process the Broadcast distribution template.

3. When users save a BizBroadcast Distribution Template with a workbook containing dynamic analysis sets (see screen shot below) and the user attempts to run a distribution, BizBroadcast will prompt the user to save the workbook and fail to distribute after the first time. Excel workbooks that are dragged and dropped from BizInsight are created as a temporary file on the local machine. BizBroadcast is unable to recognize a temporary file. The workaround for the drag and drop feature in BizInsight is to save the BizBroadcast Distribution Templates in xlsx format and save the newly created workbook on the local machine for BizBroadcast to distribute multiple times.

Parameters		2 ×
Parameters Parameter <u>n</u> ame: RDLName RDLLocation UserID Password PK Expiration DataSetFilter	Prompt fr      Use the f      Get the v      Sheet3	er value is obtained: or value using the following string: following value: ralue from the following cell: Lt\$J\$4
		OK Cancel

- 4. BizNet Software, Inc does not recommend using BizBroadcast to distribute workbooks with worksheet event macros (ie. Worksheet\_Activate, Worksheet\_SelectionChange, etc). During distribution, the macro will run once during the refresh phase of the broadcast, then again as BizBroadcast processes the worksheets(s) being distributed. In total, the macro will be executed at least twice during a BizBroadcast distribution resulting in degraded distribution performance.
- 5. If BizBroadcast is used to distribute reports via email using Outlook and an anti-virus program is not installed on the workstation, Outlook security will prompt the user to Allow or Deny the email for each distribution row. Install an anti-virus program on the workstation to address this issue.

Microso	oft Office Outlook
١	A program is trying to send an e-mail message on your behalf. If this is unexpected, click Deny and verify your antivirus software is up-to-date.
	For more information about e-mail safety and how you might be able to avoid getting this warning, click Help.
	Allow Deny Help

6. Excel 2007 contains unsupported icons for **Check for Updates** and **Buy Now** ribbon Buttons.
