- V. Note on Terminal Services..... 5

7.5.1 Release Notes

1. Added Windows Authentication support for SQL Connectors.
2. Command line installation now works for both Standard and Gateway installation types.
NOTE: There is a specific command line tool that supports the Standard installation type.
3. When a BizNet licensed user migrates from BizInsight 7.4.9 to 7.5, certain data will be collected and sent to BizNet:
 - a. Device ID used during activation
 - b. Windows version and bitness
 - c. Excel version and bitness
 - d. Connectors installed
 - e. System manufacturer
 - f. System model
 - g. Processor count
 - h. CPU Speed
 - i. Total RAM
 - j. C:\ drive free space
 - k. C:\ drive total space
4. Fixed an issue with PackNGo where workbooks without a table wouldn't refresh properly.
5. Fixed intermittent issues where clicking the OK, Cancel, and Select columns buttons in the Query Data window occurred when multiple workbooks were opened.
6. Fixed an issue where cell references in filters in tables were not working correctly.
7. Fixed issues with creating data validations.
8. Fixed an issue with the underlying SuperTable for data validations.
9. Fixed issues with saving MyQueries to the Navigation Pane.
10. Fixed an issue with the Buy Now button not working.

11. Replaced the link in the BizNet Assistant for “Please tell us about your experience.” The previous link was dead.
12. Fixed an issue where the workbook would corrupt when it contained a link to external data.
13. Enhanced the status messaging window button to read “Hide window” instead of “Cancel.”

7.5.1 CRM Cases

1. CASE0000043694 - Workbook is corrupting using external data in Excel and BizInsight7 loaded
2. CASE0000042101 - PackNGo hangs Excel loading output that doesn't contain a table
3. CASE0000042494 - #Service_Faulted_Channel in PackNGo output
4. CASE0000039811 - BizInsight License in a Citrix VDI Environment
5. CASE0000030620 - BizNet API requires administrator rights to install
6. CASE0000029876 - BlackBaud Content Installer
7. CASE0000041424 - Enhance product to deactivate license keys when uninstalled
8. CASE0000042505 - Error contacting service opening PackNGo out

7.5 Release Notes

1. For Standard Client deployments, administrator privileges are no longer required.
2. For existing users running BizInsight 7.4.9, Check for Updates requires elevation to complete the migration. Future updates will not require elevation.
3. The migration from BizInsight 7.4.9 to BizInsight 7.5 takes longer to run than a normal check for updates. A message notifies this user of the fact and allows them to cancel the migration process.
4. The Advanced Configuration Tool has been re-designed to make it more user friendly.
5. The Setup.exe file is no longer necessary for a normal installation of the. It is still necessary when running the command-line installation.

7.5 CRM Cases

1. CASE0000041009 – drilldown blank when using expressions
2. CASE0000041525 - Drilldown blank when using nested functions
3. CASE0000042833 - Security Tool Group Restrictions not applying

Note on Terminal Services

This build of BizInsight 7.5 helps to resolve common issues experienced when deploying in a Citrix/Terminal Services environment with the following enhancements:

1. Standard Client installations no longer require admin rights during installation. If users are migrating from 7.4.9 to 7.5, they will need admin rights for the migration but can then be downgraded to a regular user.
2. The Terminal Server Client Setup file now supports command-line arguments. These command-line arguments include the activation code, configuration path, a logging option, and an update command. When command-line arguments are used, the installation will run silently. This addresses issues encountered in roaming profile and remote deployment environments. This feature is only compatible with Terminal Services client installer and requires the Setup.exe.
3. When using the command-line tool, an uninstall batch file gets created that will uninstall and deactivate the product.
4. A “command-line tool” has been provided to assist in the creation of batch files that can be run for the silent command-line installation.
